

***AntS Recycle™* - Recycling Information System**

AntS Recycle™ - Recycling Information System is designed to support companies and recycling networks with their recycling-related processes. Changing laws and regulations place a considerable administrative burden on producers and importers of products. *AntS Recycle™* helps these organizations by providing them the tools to manage and control recycling-related processes.

From individual companies to global networks

While *AntS Recycle™* can be used by any organization, it is designed for whole recycling networks. Producer consortia can use it to set up and administer recycling processes for their member companies, individual producers use it to monitor their statistics and to fulfill their legal reporting obligations. Regulators and government agencies use *AntS Recycle™* to study the statistics and to get the information required for EU-reporting. Other companies involved in the recycling processes (such as pre-processors and recycling operators) use the system to report the results of their tasks. All the users can administer their contracts and documents on-line. In short, *AntS Recycle™* can be used by all organizations involved in the recycling network.

Main features:

- Controls recycling processes and manages related documentation
- Support for producers, consortia, regulators, recycling and logistics operators, consumers and other interest groups
- Automatically generates regulatory reports
- Can be used for all product categories and types with unlimited hierarchies
- Easy to modify to fit local laws and regulations

***AntS Recycle™* can handle all recycling processes across industries**

AntS Recycle™ was originally developed in response to the requirements of the Waste Electrical and Electronic Equipment-directive. In addition to waste electrical and electronic equipment, the system can easily be modified to, for example, handle the requirements of end-of-life vehicles, packaging materials or other recyclable products. The system is also RFID-ready, it can be used to identify and handle individual products.

Benefits for the whole recycling network

The main benefits of the *AntS Recycle*TM information system are listed in the table below:

User	Main benefits
Producer/importer	• One system to handle the whole recycling process from receiving to reporting • Easy way to fulfill regulatory obligations • Ability to control the whole process, including quality and costs • Cost savings
Regulator/ governmental agency	• Ability to follow the effects of the regulations and the compliance of the companies • Identify "free-riders" • Get "EU-ready" reports
Consortium/ industry association	• Ability to set up recycling processes and supporting contracts for the whole consortium/product categories • Reduce the number of administrative personnel needed • Better cost control and ability to accurately divide the cost • Chance to provide real value to member companies and help them meet regulatory requirements
Suppliers/recycling partners	• One system to report the results of recycling operations for multiple companies • Automated interfaces
All users	• Better quality of operations • Channel to inform users • Joint investment, individual companies do not need to invest in their own solutions • No software installation needed, no new hardware required • Easy to use user interface • RFID-ready

The *AntS Recycle*TM-information system is continuously updated to reflect changes in the regulations. New features are added based on the needs of the users of the package.

Software as a service

*AntS Recycle*TM is designed to provide services to whole recycling networks. In many cases it is more cost efficient for an industry association or a consortium of companies to buy and use the system instead of all the companies getting their own copy of the system. *AntS Recycle*TM is usually operated by one network organization (such as consortium, industry association or governmental agency). Alternatively, the system can be operated by Antrea Solutions Oy.

Where appropriate, *AntS Recycle*TM can also be bought as a configurable software package to be installed and operated on company hardware.

*AntS Recycle*TM can help you control your processes and cut costs

Let us show you how *AntS Recycle*TM can help your organization achieve efficient and effective recycling processes. We can arrange a free consultation where we together can evaluate the benefits your organization would get by using *AntS Recycle*TM.
